

# The communications ecosystem dedicated to the dedicated

## Designed to fit the unique and evolving communications needs of first responders and those who support their vital efforts

FirstNet provides healthcare professionals much more than just the ability to make and receive calls and access data. FirstNet is about a commitment to make your communications simpler, safer, faster and more effective. So, you can focus on what's important.

It's designed to fit your unique and evolving communications needs and the needs of those working to support your vital efforts.

FirstNet grew out of a 9/11 Commission recommendation calling for improved communications for U.S. first responders. On 9/11, many emergency response teams had trouble communicating with each other. So, Congress established the First Responder Network Authority and charged them with creating a nationwide broadband network dedicated to America's public safety community.

After a robust RFP process the First Responder Network Authority contracted AT&T to deliver this reliable and innovative solution to you. Together, we will unlock innovation and an ecosystem to support next generation tools to help you save lives and protect communities.

A communications tool that provides:

- Interoperability between trauma centers, public safety agencies and jurisdictions
- Customized customer service, with dedicated 24/7 security and helpdesk operations support centers
- A highly secure app ecosystem
- Network disaster recovery resources

We are working to bring the U.S. public safety community together onto one highly secure, high-speed, dedicated wireless broadband network. So, you can operate faster, safer and more effectively when lives are on the line.

That's our commitment to you: To build the best public safety platform possible to meet your communications needs.
