

for every step along the reproductive journey

Women's health: Pregnancy

To ensure healthy outcomes for all, prenatal care is vital. Women who don't receive it are 3-4 times more likely to die from pregnancy-related complications than those who do.1 Yet barriers to prenatal care remain, particularly for people of color, people with lower incomes, and other marginalized groups. 1 Health centers can impact maternal care in a way few other organizations can,² and we can support your efforts. By offering the screening your patients need throughout pregnancy, we can help you improve both patient outcomes and quality-measure performance.

>500K

In 2022, health centers served more than 500,000 prenatal patients³

Infants whose mothers did not receive prenatal care are 5 times more likely to die in infancy¹

82% vs 68%

From 2019 to 2021. 82.9% of White mothers had early prenatal care vs 72.3% of Hispanic mothers and 68.6% of Black mothers⁴

50%

of US births are covered by Medicaid, suggesting health centers can help address adverse outcomes²

Screening is an essential component of a healthy pregnancy. We offer the comprehensive testing you need to support your patients, from planning through pregnancy and wellness.

Helping you improve quality-metric performance while supporting the entire reproductive journey

Common testing for pregnant and postpartum women
