

# Applicators

## Meet our Family of Microbrush Applicators!

Our leading product suite ensures that we have the right tool to meet your needs. Our products embrace simplicity in their design to offer familiar, easy control to facilitate a successful outcome on every restoration.

### Micro-Stix

Micro-Stix™ are designed to securely place and hold fragile components used in dental restorations. This innovative tool is ideal for delicate or small restorations, giving clinicians the confidence to handle fragile items, limiting the risk of shifting or detachment from the instrument.

### Microbrush (Plus and Tube Series)

Our award-winning Microbrush applicators feature non-absorbent fiber tips and a bendable neck to give dentists maximum control of their procedures. Packaged in convenient, practical tubes for hygienic dispensing, or tray refills designed to fit in the Microbrush sion™ dispenser, these applicators are offered in a variety of sizes and colors.

### Microbrush X

Designed with a thinner, longer brush tip to simplify application for procedures involving confined spaces and allows for even placement of material. The short, stiff brush fibers hold a fraction of a drop of material for less waste and controlled application.

### Ultrabrush

Inspired by dentists, this bristle brush applicator bends close to tip for improved control and ease of reach. Available in two sizes, Ultrabrush bristle brush applicators are uniquely designed to provide better spreading action and a more precise application of material.
